Ticketing Lite

Introduction

VMS is a software and hardware solution to cater for the complete management of any venue that sells tickets, takes bookings, sells merchandise, provides hospitality or manages area access.

As a modular based suite you can pick the functionality your business needs now and add more modules as you grow.

VMS is easy to use and provides the functionality needed to run any size venue in a single application, at a fraction of the cost of combining separate applications such as Microsoft Dynamics, SAP or Sage.

As you grow VMS will grow with you, no need to worry about your systems keeping up. With VMS you already have all the tools you need. With all your customers' data held securely in a single place, managing your [GDPR](#) data protection requirements becomes easy, more efficient and less costly.

This document describes the [VMS Ticketing Lite](#) functionality.

VMS Ticketing Lite

Sometimes you want to sell tickets for an event without the need of allocating an area or seat. Or you are a smaller venue offering an area without seating areas or turnstiles.

Team Name

VMS Ticketing Lite is a slimline version of the [VMS Ticketing](#) module. It has been developed with smaller venues in mind where ticket automation may not be available or required. It allows you to set up events with a single ticket price that your customers can book online. Tournaments can be set up with a single ticket price and tickets can be sold to individuals and groups. There is no need to print a ticket with a 2d barcode as the customers' receipt will act as the ticket. For example, a tournament could be set up with space for 100 teams to attend. They would register and pay online and then print out their details to bring with them.

Event Title: (The F2 FC Celebrity Football Match & Book Launch) abc

If you find in the future that you need to print your own tickets, with barcodes and require more functionality, an upgrade to the full [VMS Ticketing](#) module is a quick and easy process.

VMS Reporting

The [VMS Reporting](#) functionality is an integral part of the VMS application, the ability to run reports no matter the modules you have is something we insisted on including. With VMS Ticketing Lite, the [VMS Reporting](#) functionality means you can manage your events on the day. Details of all registered attendees are available to you as well as all the financial reports you would expect.
